

H~M Trading Institute — QuantLab

The Quant Research OS · Executive Summary — August 2026 · CONFIDENTIAL · hmtrade.business

Africa's retail investors have execution but no research. We built the research layer — and it is live today.

The Problem	The Solution — QuantLab
Brokerages let Africans buy; nothing helps them think. Institutional research is USD-priced, Western-railed, closed to them. AI made research cheap — nobody delivered it locally.	Production-grade AI research platform: sign up, connect your own DeepSeek key (BYOK), run unlimited research agents — market scans, backtests, journal analysis → rendered reports with live progress.

WHAT IS LIVE TODAY (VERIFIED 2026-08-22)

- Run loop verified end-to-end: prompt → queued → claim → engine → artifacts → completed (React SPA · Vercel, Python worker · Railway, Supabase backend)
- Shadow Account live: trade-journal → behavior profile → shadow backtest → HTML report (Premium tier)
- Billing test-ready: Paystack NGN, signed webhooks, E2E 8/9 · Admin live (suspension, audit) · Sentry · 83 worker tests · Cloudflare SSL live

UNIT ECONOMICS (FULL MODEL IN THE BRIEF, SECTION 15)

Metric	Value	Metric	Value
Blended ARPU	₦30,000 / \$20/mo	Gross margin	>98% (BYOK)
LTV (7%/mo churn)	\$286	LTV : CAC	35.7 : 1
Target CAC	\$8	CAC payback	0.4 months
Infra (MVP)	~\$12/mo	1,000 subs	\$240k ARR
Subscribers	MRR (≈USD)	ARR (≈USD)	
100	\$2,000	\$24,000	
250	\$5,000	\$60,000	
500	\$10,000	\$120,000	

THE ASK — \$50,000 PRE-SEED · 12-MONTH RUNWAY · break-even at ~210 subscribers (month 5 of a 25→750 ramp).

Category	Share	Amount	What it buys
Go-to-market & acquisition	40%	\$20,000	Creator partnerships, community campaigns, referral incentives
Compliance, legal & entity	20%	\$10,000	Registrant block, ToS/Privacy, NDPR posture, support
Product expansion	25%	\$12,500	Phase 1 FastAPI + research governance, API, mobile, Stripe
Working capital & runway	15%	\$7,500	Paystack float, infra buffer, contingency

"The engineering is done. The company is what the raise builds."
